

The only data platform built for India's DPDP Act 2023 — with cryptographic compliance proof every regulator can verify in 60 seconds.

THE PROBLEM

India's DPDP Act 2023 forces every Indian company holding citizen data to prove compliance to regulators. AWS, GCP, and Azure cannot legally provide this proof — their data routes through US servers by design. Every Indian bank, hospital, and government department now needs a sovereign, auditable, India-resident data platform. Today they have no good option.

THE SOLUTION

DataNexus is open-source data infrastructure built on Apache Hadoop. It runs on customer machines, in customer cloud accounts, or in air-gapped facilities. Every transformation is recorded permanently on Hyperledger Fabric. Compliance reports generate in 60 seconds with cryptographic blockchain proof that any court or regulator can independently verify.

67%	60s	5.5σ	100%	0
cost reduction vs AWS	audit report time	Six Sigma quality SLA	DPDP compliant by design	cloud lock-in

HOW IT WORKS

- 1. Living data nodes.** Phones, sensors, hospital machines, satellites — every device becomes part of the fabric.
- 2. Zero gravity fabric.** Data is identified by SHA-256 hash, not by storage path. It flows automatically to wherever compute needs it.
- 3. Conscious compliance.** DPDP, GDPR, and HIPAA encoded as smart contracts. Data refuses illegal border crossings autonomously.
- 4. Six Sigma quality.** Every pipeline measured to 5.5σ. Auto-quarantine below 4.0σ. Self-healing fixes 80% of failures.
- 5. Blockchain proof.** Every transformation, every access, every compliance decision logged permanently on Hyperledger Fabric.

WHO IT'S FOR

- Indian banks.** RBI compliance, KYC data residency, transaction audit trails.
- Hospitals.** Patient PII protection, multi-state regulatory reporting, EHR integration.
- Government departments.** Citizen data sovereignty, MeitY-aligned digital infrastructure.
- Insurance companies.** IRDAI compliance + DPDP, claims data lineage.
- Multinationals in India.** Hybrid deployment to keep Indian data in India while running global analytics.
- Manufacturing & retail.** Supply chain data, IoT sensor streams, customer transaction records.

WHAT I AM ASKING FOR

15 minutes to learn what your real data and compliance pains look like. I will ask 3 questions. I will listen. I will not pitch. If at the end you want to see a working demo, I will show you the 60-second blockchain compliance flow.
